BF = Back Fat; CW = Carcass Weight; M = Muscle

MINIMUM CARCASS STANDARDS

1. Minimum and maximum for hot carcass weight, 165 to 230 pounds, respectively.
 2. Carcass muscle score is to be equal to or better than the Intermediate (2.0) pictured in the 2000 "Composition and Quality Assessment Procedures,"
 3. Carcass meat quality will be subjectively evaluated for the following using the "Composition and Quality Assessment Procedures," National Pork Board.
 4. Percentage Fat Free Lean will be predicted by the following equation ("Composition and Quality Assessment Procedures," National Pork Board):
$$8.588 - 21.896 \times 10\text{th rib fat depth, inches} + 3.005 \times 10\text{th rib loin muscle area, in}^2 + 0.465 \times \text{warm carcass weight, lbs.}$$
To convert to % fat-free lean, divide by warm carcass weight and multiply by 100
 5. Other disqualifications: a. Cryptorchids; b. Carcass that requires more than 1% trim due to "old" bruises or infected at injection site, abnormalities cysts, abscesses, diseased joints etc.
- The carcass judge will select and place the top 10 carcasses on overall carcass merits from among the 15 carcasses with the highest percent fat free lean (FFL).
